

Lacerte System Recommendations Checklist

Please print one checklist per workstation

Use this checklist to check your system(s) against our system recommendations. Use the notes field to check that component off of your list or make notes about what your system(s) contains.

Take this list, including your comments about your current system(s), to your local technology retailer or your trusted IT professional. They will be able to consult you on the upgrades you may need or a new system purchase.

System Recommendations
